

# GEMÜ 533 eSyStep

## Motorized globe valve

### Features

- Suitable for vacuum up to 20 mbar (a)
- Actuating speed max. 3 mm/s
- Open/close function or with integrated positioner
- Parameterizable via IO-Link
- Linear or modified equal-percentage control characteristics
- On-site or remote end position programming via programming input
- Various function integrated (e.g. feedback, stroke limiter, etc.)

### Description

The GEMÜ 533 2/2-way globe valve is motorized. The eSyStep actuator is available as an ON/OFF actuator or as an actuator with integrated positioner. The valve spindle is sealed by a self-adjusting gland packing providing low maintenance and reliable valve spindle sealing even after a long service life. A wiper ring fitted in front of the gland packing protects the seal against contamination and damage. An integral optical and electrical position indicator is standard.

### Technical specifications

- Ambient temperature\*: 0 to 60 °C
- Media temperature\*: -10 to 180 °C
- Operating pressure\*: 0 to 15 bar
- Nominal sizes\*: DN 15 to 25
- Body configurations: 2/2-way body
- Connection types: Flange
- Connection standards: ANSI | EN | JIS
- Body materials: 1.4408, investment casting | EN-GJS-400-18-LT, SG iron
- Seat seal materials: 1.4404 | PTFE | PTFE, reinforced
- Supply voltage: 24 V DC
- Actuating speed: max. 3 mm/s
- Protection class: IP 65
- Conformities: FDA | Reg. (EC) No. 1935/2004

## GEMÜ CONEXO

The interaction of valve components that are equipped with RFID chips and an associated IT infrastructure actively increase process reliability.

Thanks to serialization, every valve and every relevant valve component such as the body, actuator or diaphragm, and even automation components, can be clearly traced and read using the CONEXO pen RFID reader. The CONEXO app, which can be installed on mobile devices, not only facilitates and improves the "installation qualification" process, but also makes the maintenance process much more transparent and easier to document. The app actively guides the maintenance technician through the maintenance schedule and directly provides him with all the information assigned to the valve, such as test reports, testing documentation and maintenance histories. The CONEXO portal acts as a central element, helping to collect, manage and process all data.

### Ordering

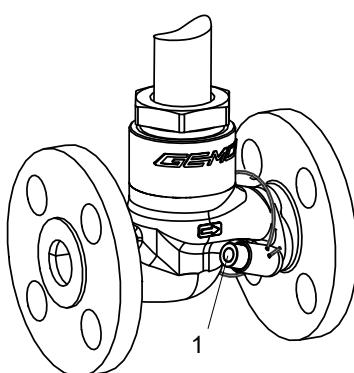

GEMÜ Conexo must be ordered separately with the ordering option "CONEXO" (see order data).

In the corresponding design with CONEXO, this product has an RFID chip (1) for electronic recognition. The position of the RFID chip can be seen below.

For electronic identification purposes, each replaceable component contained in the product is equipped with an RFID chip (1). Where you can find the RFID chip differs from product to product.

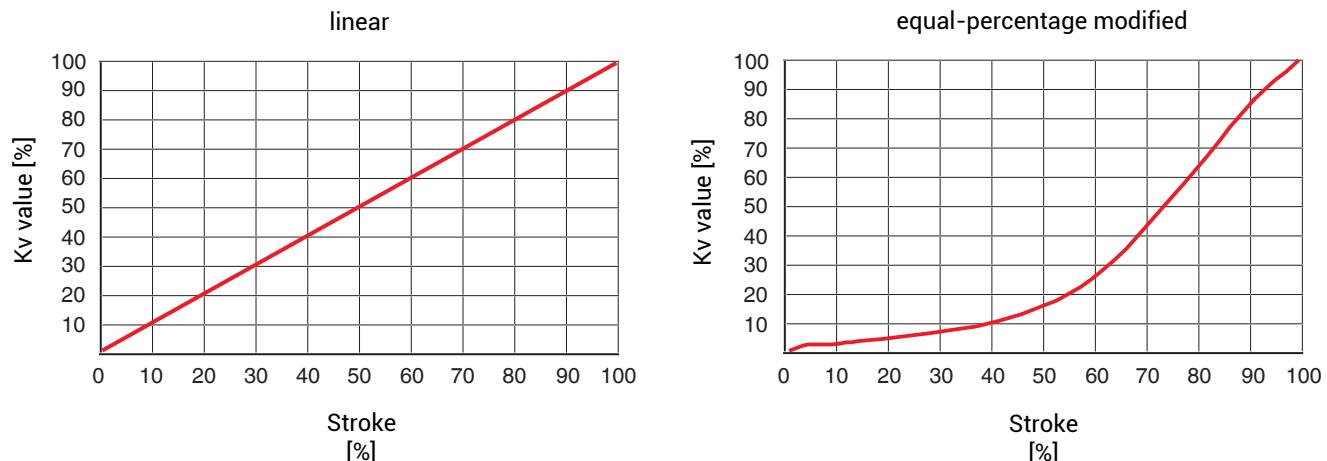

Actuator RFID chip

Valve body RFID chip

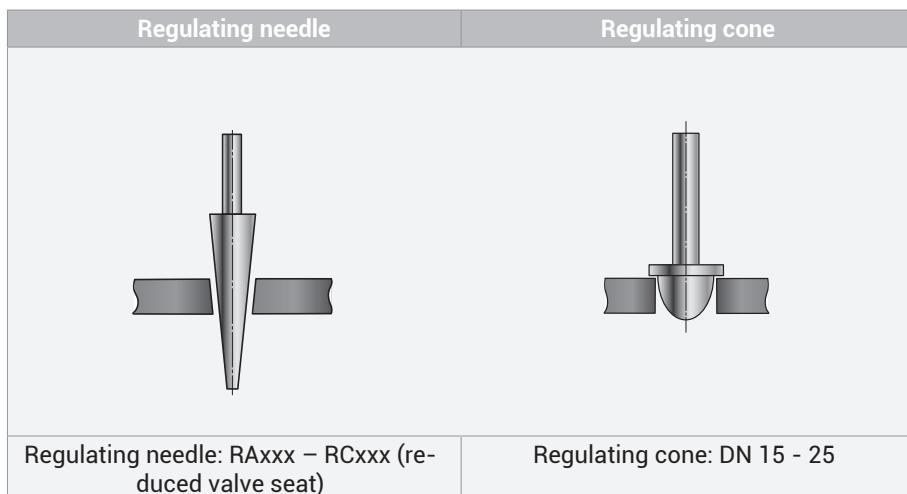

The CONEXO pen helps read out information stored in these RFID chips. The CONEXO app or CONEXO portal is required to view this information.

## Kv value diagram

The diagram shows the approximative curve of the Kv value characteristic. The characteristic may deviate depending on valve body, nominal size, regulating cone and valve stroke.
